Marijuana Grow Guide

Outdoor Ganja

Strong compact plant, very high. This homogenous Sativa type weed originates from Nepal and contains a

high level of THC. Grow it from fertile soil and add nursery supplements to the water. This excellent quality

strain grows up to 1,75 meter and is especially loved by musicians around the world.

100%Sativa,a hard plant

to grow but famous for its special qualities.A classic Sativa high,and good results for those who do not mind to

wait a little longer. Strong, compact plant, mellow.Original lambsbreath from Jamaica. Pure Sativa with light

Skunk crossing. Flowering time 10 or 12 weeks. (1st two weeks 14 hours of light / 8 weeks 12 hours of light /

last 2 weeks 10 hours of light). Has Narrow leaves, a Plant with yellow-whitish long buds.Cannabisstrands

hanfsorten

Colombian Widow is a cross of Greenhouse's WW and a skunky

two hit Colombian. The Colombian female

was chosen for its

robust growth,

relatively short

flowering time for a

tropical, dense buds and

stickiness. It is a

two hit lady with a piney aftertaste. She is crossed with a WW male with good

branching. The

result is a

well
branched,

sticky Colombian with

an intense mind

bending high. The plants branch

and bud

extensively and are ideal for scrog. In fact have several Seeds Marijuana under

the screen now and I would say it is great Thseeds for

weaving its numerous

long branches through the screen. Expect buds to really begin putting on the bulk at about week 6. 8-10 for

finishing. It can get big so I

flower at 12-15" no more. If

you are not scrogging then

train the plants and you

should easily get multiple

colas." - Santa Marta cannabis-

sativa

seedsdirect

Saponification of 93 gave

the metabolite 84, which was reduced with LiAlH₄ to 71
